

1                   ABSTRACT

2

3                 An articulating window assembly is adapted for use with a support structure. The  
4                 assembly includes a windowpane with an inner surface. A hinge is adjacent to the inner surface.  
5                 The hinge includes a cylindrical member having a pivot axis and a stud member attached to the  
6                 cylindrical member. A polymeric member surrounding at least a portion of the hinge member so  
7                 as to permit, the hinge member to articulate about the pivot axis.
